

Human Centric Lighting

Human Centric Lighting works in harmony with human's circadian rhythm; the solution is based on Bluetooth together with an intuitive and portable APP, through which you can easily choose pre-programmed curve or customize your own curve. Color temperature and brightness will change automatically according to the time of the day. It enhances day-to-day mood, boost productivity, improve attention levels, and more importantly promotes wellbeing and help patient recovery.

Human Centric Lighting Profile on the Bluetooth APP

Default profile for health care application

* End-user can customize their own profiles on the APP, with a CCT change from 2700K to 6500K.
